Osteoarthritis and Cartilage

Letter to the Editor

Response to the letter to the editor, regarding the manuscript “Defining the load bearing axis of the lower extremity obtained from anterior–posterior digital radiographs of the whole limb in stance”

Dear Mr Sudiptamohan Mukhopadhyay,

Thank you very much for the interesting question and evaluation.

In our method, the patient stands on both legs with hip and knee fully extended and tibial tuberosities facing directly forwards, according to the method of Chao.

We would welcome your opinion on the risk of the measurements being affected by the variation in the positioning of the lower limbs.

Sincerely yours,
Toshiaki Takahashi, MD
Yasutake Iseki, MD
